Human Energy Center™
A NEW DISCIPLINE OF MEDICINE

FOR IMMEDIATE RELEASE

Einstein Proved Matter Is Energy. A Florida Doctor Asks Why Medicine Has Never Measured Yours.

> *Psychiatrist Dr. Fenton G. LeBon launches the Human Energy Center — a new clinical discipline that treats human energy as a measurable vital sign, built on nano-delivered NAD⁺ and a complete peptide protocol.*

JUPITER, Fla. — Oct. 28, 2026 — Fatigue is among the most common reasons Americans see a doctor. Yet there is no specialist for it, no standard measurement, and no clinical home for the patient who says, "I just don't have the energy I used to."

Dr. Fenton G. LeBon, MD, MBA, says that gap is one of the largest blind spots in modern medicine — and he is building the specialty to fill it.

"Medicine measures blood pressure, glucose, and kidney function with real rigor," said Dr. LeBon. "But energy — the thing patients care about most — we treat as a feeling. Energy is not an organ's property. It is a system's output. And systems can be measured."

Dr. Fenton G. LeBon, MD, MBA
Founder, Human Energy Center; Co-founder and CEO, Molecular World Health

A new framework: energy as a system's output

The Human Energy Center model evaluates energy across six domains: how the body produces energy, delivers it, regulates it, consumes it, recovers it, and how the nervous system governs all five. Rather than prescribing a stimulant or more caffeine, the approach starts with a principle Dr. LeBon calls the First Law of Human Energy: energy cannot be sustainably increased until the biological factors that drain it have been identified and removed.

The framework is laid out in Dr. LeBon's forthcoming book, *The Human Energy Center*, and forms the clinical basis of the Human Energy Center program.

The molecule at the center: NAD⁺

At the cellular level, Dr. LeBon's work centers on NAD⁺ (nicotinamide adenine dinucleotide), a coenzyme that cells require to convert food into usable energy. Published research has documented that NAD⁺ levels decline with age, and the molecule has become one of the most closely watched targets in longevity science.

The challenge has been delivery. Dr. LeBon's answer is nanoNAD+™, a nanotechnology-based delivery approach developed through Molecular World Health, the company he co-founded and leads. It is offered in topical, intranasal, and practitioner-administered formats.

A complete peptide protocol

Alongside NAD⁺, Dr. LeBon has developed a full peptide protocol within the Human Energy framework, paired with a training program that teaches clinicians how to evaluate patients and apply it.

"Every specialty in medicine started when someone decided a problem deserved its own discipline," said Dr. LeBon. "Cardiology. Oncology. Sleep medicine. Energy is next."

ABOUT DR. FENTON G. LEBON

Dr. Fenton G. LeBon, MD, MBA, is a psychiatrist based in Jupiter, Florida, co-founder and CEO of Molecular World Health, and creator of the Human Energy Center clinical framework. He is the author of the forthcoming book *The Human Energy Center*.

ABOUT THE HUMAN ENERGY CENTER

The Human Energy Center is a clinical model dedicated to evaluating and restoring human energy as an integrated physiological output. Learn more at humanenergycenter.com.
