FOR IMMEDIATE RELEASE

Anker Expands Certified Asthma & Allergy Friendly® Portfolio with eufy Robot Vacuum Omni S2 Pro

Certified Anker eufy Robot Vacuum Omni S2 Pro gives people with asthma, allergies, and sensitivities more options to support healthier indoor air

Washington, D.C. (November 19, 2026) – The Asthma and Allergy Foundation of America (AAFA) and Allergy Standards Limited (ASL) announce that the Anker eufy Robot Vacuum Omni S2 Pro earned the **Asthma & Allergy Friendly**® Certification, expanding Anker's Certified portfolio alongside the previously Certified Anker eufy Robot Vacuum Omni E35.

The **Asthma & Allergy Friendly** Certification Program, a collaborative initiative between the Asthma and Allergy Foundation of America (AAFA) and Allergy Standards Limited (ASL), helps consumers identify products that contribute to a healthier indoor environment.

With so many vacuum cleaners on the market making similar health claims, third-party certification helps consumers make informed decisions. Independent certification goes beyond marketing claims by testing products against published scientific standards, giving consumers a trusted guide when choosing a vacuum.

Regular vacuuming supports good indoor air quality, especially important in homes where someone is affected by asthma or allergies. Floors can harbor large amounts of dust, allergens, and irritants that easily become airborne, adding to indoor air pollution. The U.S. Environmental Protection Agency ranks indoor air pollution among the top five environmental risks to public health.

With more than 106 million people in the United States living with asthma and allergies, and individuals spending up to 90% of their time indoors, a vacuum cleaner that effectively removes allergens and prevents them from re-entering the air is a key part of managing indoor environmental triggers.

To earn the certification, the Anker eufy Robot Vacuum Omni S2 Pro underwent rigorous scientific testing and met or exceeded the Program's standards, demonstrating its ability to:

- **Remove allergens from floors:** Remove at least 90% of tested allergens from hard floors and at least 80% from carpet. Allergens assessed under the standard include cat and dust mite allergens.
- **Effectively remove household dust:** Remove at least 75% of test dust from hard floors and at least 40% from carpet.
- **Limit airborne particles and allergens during use:** Keep fine airborne particles and cat allergen below strict certification limits while vacuuming.
- **Maintain low particle emissions:** Keep fine particle emissions low even when operating on a clean floor, demonstrating that the vacuum itself does not release excessive dust into the air.
- **Maintain pick-up performance:** Demonstrate no more than a 10% loss in pick-up efficiency after two passes.
- **Limit exposure when emptying the dust bin:** Keep fine particles and cat allergen below certification limits during dust-bin emptying.

The certification adds the Omni S2 Pro to the Program's list of independently certified vacuum cleaners, expanding Anker's Certified portfolio and giving people with asthma, allergies, and sensitivities more choices to support better indoor air quality.

"For families living with asthma and allergies, the floor is where allergens settle and where children and pets spend their days. Independent certification from AAFA and ASL confirms the Omni S2 Pro captures those allergens and limits their return to the air, so they're contained rather than just moved out of sight. A clean home should also be a healthier one, and that is what we strive for in every household with Anker at its heart," said Frank Zhu, General Manager, Anker eufy.

"Colder months mean more time spent indoors and more exposure to indoor allergens such as dust and pet dander," said Kenneth Mendez, president and CEO of AAFA. "Regular vacuuming plays an important role in reducing indoor allergens. Our **Asthma & Allergy Friendly®** Certification program tests vacuums to meet strict, scientific standards for capturing allergens and limiting their return to the air. By earning Certification through this testing, the Anker eufy Robot Vacuum Omni S2 Pro gives families another trusted option to better manage indoor allergens."

"With the Omni S2 Pro, Anker now has a second robot vacuum that has met the Program's standards through independent testing," said Dr. John McKeon, CEO of Allergy Standards Limited. "Its results for allergen removal and containment were measured against published standards, and we congratulate Anker eufy on reaching this milestone."

About the Asthma & Allergy Friendly® Certification Program

The **Asthma & Allergy Friendly®** Certification Program is a collaboration between the Asthma and Allergy Foundation of America (AAFA) and Allergy Standards Limited (ASL) that tests and certifies products against strict standards to prove their suitability for people with asthma and allergies. Certified products include air cleaners, air filters, paints, bedding, vacuum cleaners, washing machines, cleaning products, flooring, and more. More information is available at aafa.org/certified.

About Anker Innovations

Anker Innovations (SZSE: 300866; HKEX: 00668), known globally as Anker, is a consumer technology company founded in 2011 with a commitment to Ultimate Innovation. Its products span charging, power, audio and entertainment, smart home, robotics, health, and creative tools, serving more than 200 million customers across over 180 countries and regions.
